

Session on “Systems Thinking” by Youth Alliance

15th Sept 2022 (3 pm onwards)

2nd Floor, Cluster Innovation Centre

Abstract: Science and Culture alike has begun to recognise that we live in an interconnected and interdependent world. Changes in one part of the system, brings about changes in other parts or the whole system. However, our problem solving approaches still include finding quick solutions to immediate problems leading to unintended consequences.

Through this session, Youth Alliance shall invite you to learn and experience a new approach to engaging with problems - whether at micro or macro levels. This approach enables you to understand how different parts of any system are related to each other and other systems, and design interventions that have ripple effects across the system. This is called **Systems Thinking**.

Speakers: Shashank Kalra, Aarti Jain and Rahul
