

MATHEMATICS EXPLORATION DAY

On 25th January, 2023, the students of M.sc. mathematics education (Batch 11) organised an event for the elementary students of the Army Public school.

The idea behind the event was to give learners an opportunity to learn as well as enjoy mathematics with the helps of games, activities and other teaching - learning materials.

The learners engaged with various activities and games, based on the concepts they are taught in the school. The energy among the learners to explore the resources and engage in every activity was remarkable.

Different activities and games were designed for the participants:

Tic tac toe, mathematical charades, treasure hunts, infinity loop game, mathematician flash, fire in the mountain, expo - card game, and many others games were organised. Every game was designed with a mathematical twist, with the purpose to make mathematics a fun and joyful learning experience.

Movie screening of great mathematical personalities like Shakuntala Devi and Ramanujan were also a part of the event.

The students enjoyed and went back with a lot of experiences that we hope will shape a world of mathematics around them.
